Aptitudes principales

Engineering
Project Management
Software Architecture

Certifications

Scrum Fundamentals Certified (SFC™)
Machine Learning with TensorFlow on Google Cloud
Learn SQL Basics for Data Science
Procesamiento de Lenguaje Natural con Machine Learning
Introduction to Reinforcement Learning

Luis Felipe Poma Astete

BSc in Computer Science | Software Engineer | Machine Learning & Cloud
Perú

Extracto

Computer Science graduate from UPC with a strong passion for software development and artificial intelligence. I enjoy applying theoretical concepts to real-world challenges and contributing to the development of innovative and impactful software projects.

Experiencia

WWL

1 año 9 meses

Software Engineer

enero de 2026 - Present (9 meses)

Лима

Led the design and evolution of scalable software solutions, driving architecture decisions, backend optimization, and platform improvements to enhance operational efficiency and system reliability.

- Acted as the technical lead for the design, architecture, and technology stack selection of an internal project-tracking application, aimed at optimizing resource allocation and maximizing billable hours across active company projects.
- Engineered a comprehensive reporting module within the application to generate data-driven insights and analytics, enabling project managers to streamline decision-making.
- Optimized backend microservices by decoupling heavy, long-running processes—such as automated report generation and asynchronous email dispatches—into AWS Lambda functions, significantly reducing infrastructure overhead and improving system scalability.
- Spearheaded the continuous improvement, maintenance, and scaling of the multi-tenant microservices platform established in the previous cycle, ensuring high availability and code quality.

Software Engineer Intern

enero de 2025 - enero de 2026 (1 año 1 mes)

Лима

Contributed to the development and modernization of scalable software solutions, working across backend, frontend, and mobile applications for industrial monitoring and field operations.

- Contributed to the migration from a monolithic Flask application to a microservices architecture, decomposing the system into 9+ independent FastAPI services and enabling a scalable multi-tenant platform.
- Implemented and maintained backend services using Python and FastAPI, improving performance, reliability, and maintainability of production systems.
- Developed and enhanced frontend features using React and TypeScript, supporting real-time monitoring dashboards and data visualization for geotechnical and IoT sensor data.
- Designed and implemented OAuth 2.0 authentication and JWT-based authorization, integrating SSO and secure access control across distributed services.
- Built offline-first mobile application features to support field data collection, including data synchronization and conflict resolution logic.
- Collaborated with cross-functional teams to deliver end-to-end solutions for mining operations, including monitoring, inspections, and compliance workflows.

"Uribe's School"

Web Developer

octubre de 2024 - enero de 2025 (4 meses)

Лима

Managed the end-to-end lifecycle of the school's official landing page, driving the project from initial client consultation and UI/UX prototyping to final implementation and deployment.

- Full-Lifecycle Development: Oversaw the entire process including requirements gathering, wireframing, interactive prototyping, coding, and deployment.
- Performance & Architecture: Built a fast, SEO-friendly, and lightweight static architecture using Astro and tailored modern CSS for fully responsive layouts.
- Interactive UI: Integrated dynamic and interactive components (such as contact forms and interactive elements) utilizing React.
- UX/UI Design: Created high-fidelity prototypes ensuring an intuitive user journey focused on maximizing student enrollment leads.
